

Steve Figgins, Environmental Services Practice Leader, Western Business Unit

Steve Figgins is the Environmental Services Practice Leader for Brown and Caldwell's Western Business Unit. He is a geophysicist with more than 25 years of experience in conducting, scheduling, and managing both environmental and geophysical field surveys in diverse environments. He has been involved for 20 plus years providing due diligence to clients for

potential site acquisitions and has looked at hundreds of sites to determine the most applicable methods and remediation approaches for various hydrogeologic environments. Steve has managed soil and groundwater remediation programs specifically designed for site closure. He has been involved in selecting remedial options for different sites, and has worked closely with a variety of regulatory agencies to present creative ideas to accelerate site closure. He provides review of geophysical, hydrogeological, remediation work plans, as well as data sets and final interpretations.

Mr. Figgins has presented training workshops to the Department of Toxic Substances Control (DTSC) and Regional Water Quality Control Board (RWQCB) on new technical methods for evaluating Dual-Equilibrium Desorption models to better understand the amount of volatile organic compounds (VOCs) that can effectively be removed from soils. He also provided workshops to the RWQCB on in-situ remediation methods and their applicability to metal and chlorinated solvent clean up sites. In 2007, Steve was appointed to assist on the DTSC Advisory Panel.
