

COMMUNITY UPDATE

The mission of DTSC is to protect California's people and environment from harmful effects of toxic substances by restoring contaminated resources, enforcing hazardous waste laws, reducing hazardous waste generation, and encouraging the manufacture of chemically safer products.

What is EnviroStor?

EnviroStor (www.envirostor.dtsc.ca.gov) is the Department of Toxic Substances Control's data management system for tracking our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or potential contamination. EnviroStor provides data and documentation of Permitted Facilities and Cleanup Sites including State Responses, Voluntary Cleanups, and Military Site Cleanups.

EnviroStor provides the public with access to non-confidential information and documents of over 13,000 cleanup and hazardous waste facilities across California.

Standard Reports are available. These reports include: Facilities with Pending Permit Decisions, Completed Enforcement Actions, and Sites/Facilities with Land Use Restrictions. Additional reports are also available.

Automated Email Alerts can be setup to receive updates on the latest information and documentation released for the facilities/sites you're interested in.

EnviroStor Help Desk is available to answer questions regarding the system. Service hours are M-F, 8 – 5 PM
Email: envirostor@dtsc.ca.gov
Phone: 1-877-7TOXICS (1-877-786-9427)

September 2017 Update – What's New?

EnviroStor's new Smart Search tool provides the ability to search EnviroStor using various parameters and see results immediately as you type. Search through the 13,000+ facilities and sites and find any of the available standard reports from one search tool.

Office of Environmental Health Hazard Assessment's (OEHHA) CalEnviroScreen data has been integrated into EnviroStor to provide additional Environmental Justice context to the facilities/sites in EnviroStor. A new CalEnviroScreen GIS Layer can be found on the EnviroStor Map, which displays a color-coded visual of each California Census Tract's CalEnviroScreen Score, along with the ability to filter the EnviroStor Map results by CalEnviroScreen decile.

EnviroStor's Map tool allows users to view facility/sites on an integrated Google Map. Integrated Google mapping features provide satellite imagery, terrain maps, street view and distance measuring tools. Assorted filters are available to filter map results by Assembly, Congressional, and Senate Districts, along with the ability to filter results by any of California's Counties.

Take a Tour feature allows users to take an interactive tour of how to use EnviroStor and where to locate information. An interactive tour of the Map tools is also available.
