Subject: Re: Post my presentation that I was not allowed to complete at the IRP meeting
Date: Tuesday, September 27, 2016 7:03:11 PM

As you can see from your own posting of Ms. Rowe's 31 page presentation disputing that there is contamination to cleanup and what the appropriate use of the word, "meltdown" is, your process is extremely biased and not designed to learn anything relevant to your task. We're just check-boxes to you, and that's made clear by the way this was allowed when it did NOT follow the agenda, not even close.. Meanwhile, other speakers who asked IN ADVANCE of the deadline to make a presentation, were CUT OFF because they weren't there to compliment DTSC. Why was the room filled with defenders and deniers, instead of an honest discussion about DTSC's failed public process?

I think this is a perfect example of the perversion of the process by DTSC. You wonder why there is such a feud when you perpetuate the nonsense by giving this priority over your own agenda. As a result of your inability to do your job as an "independent review panel" the audience responded as expected and went in to their usual revenge or denial mode.

YOU are the best example of the failures of DTSC because you refuse to follow your own science, make facts unavailable and give priority to polluter surrogates seeking to let Boeing off the hook for the thousands and thousands of yards of deadly material that remains at the site.

Keep kicking the can down generations, meanwhile we enter a fall rainy season just moving the money around as usual, all the while, the people are not protected. The only thing DTSC seems to be willing to protect is their job.

Showing your bias for the polluter and total failure to address the problem that was the reason the IRP was created:
<http://www.dtsc.ca.gov/GetInvolved/ReviewPanel/upload/Discussion-on-public-participation-in-the-Santa-Susana-Field-Lab-community-and-other-local-DTSC-sites-by-Christine-L-Rowe-September-20-2016.pdf>

As long as you keep your head in the sand, you will continue to fail.

We need the competency of USEPA to take over so that effective and deliberate and accurate process can be delivered and public trust can be restored. As long as DTSC is in charge, that will NEVER be possible. Please look to the Regional Board and their proper rules and process as another example you can follow, because shelter-in-place and full-throated denial despite millions of documents that show the need for cleanup, the very fact that this hillbilly feud continues exemplifies DTSC's utter failure in public process, and DTSC's tendency for cover-up at every turn.

Additionally, I made a public records act request and apparently that's not being followed either. Do I need to contact the Attorney General's office to make you comply to your own state laws? That will be my next step.

Best wishes,

it's hard for me to understand the purpose of going to THREE communities in 48 hours — just to show you did, because you cannot possibly absorb the issues, especially if you insist on only hearing from the people that are on your side.

Please post this presentation: <IRP-9-20-16.pdf>

I will add the audio of the actual meeting and how I was treated by this board, and especially the Chair, and DTSC showed up in droves for this independent process that was supposed to shed light on the inactions by DTSC. Instead, it serves as another curtain for DTSC to hide behind. I will be submitting to the same legislative people who organized this process to begin with, the audio version of this perverted process, because hiding behind another unaccountable board, doesn't do anything but further corrupt the process. DTSC and the IRP need to start shedding light and acting like the oversight that you are supposed to be providing instead of the same old cover-up machine.

I hope you remember me and this day when you crushed the public process, making a future impossible. You think it doesn't matter as you sit in Sacramento far away. Shame on you.
