WHAT'S BEING PROPOSED?

Lighting Resources LLC has been operating under a Standardized Hazardous Waste Facility Permit (Permit) at this location since 1996. Although the Permit expired in June 2006, Lighting Resources submitted a timely renewal application and is allowed to continue the operation. The renewal application does not significantly change Lighting Resources' overall operation or capacities. If approved, the permit renewal will allow Lighting Resources to continue its operations as follows: 1) operating two treatment processes: a lamp machine in which fluorescent lamps are crushed and a glove box in which high intensity discharge (HID) lamps, compact fluorescent lamps and mercury-containing devices are manually disassembled; 2) storing a maximum of 100,000 fluorescent lamps, 15,000 HID lamps, four one-gallon flasks of liquid mercury generated during lamp disassembly, and 82 55-gallon drums of PCB ballasts, phosphor powder, leaded glass, neon glass, mercury-containing devices and other materials generated from the disassembly and crushing of lamps. An additional 4 drums may hold flasks. DTSC has prepared a Draft Permit that describes, and if approved, would authorize Lighting Resources' permitted activities. DTSC has also prepared a Draft Negative Declaration in compliance with the California Environmental Quality Act for this project. DTSC has determined that this project will have no significant impact on human health or the environment.
