

SSFL Weekly Activity Report
Week of September 2 – September 8, 2007

Group 2 and 3 Area RFI Reports

On September 6, 2007 staff from the Department of Toxic Substances Control's (DTSC) Human and Ecologic Risk Division (HERD), Geologic Services Unit (GSU), and Northern California Permitting and Corrective Action Branch (NCPACB) met (via telecon) with National Aeronautics Space Administration (NASA) personnel (Mr. Allen Elliot, Manager, Environmental Engineering and Occupational Health Office) and technical representatives of CH2M Hill to discuss proposed report format changes and clarifications to the risk methodology approach for Groups 2 and 3 RCRA Facility Investigation (RFI) reports for the Santa Susana Field Laboratory. Group 2 and 3 Area reports are scheduled to be submitted to DTSC in mid 2008. NASA has hired CH2M Hill to prepare the Groups 2 and 3 RFI reports. Proposed report format changes and clarifications to the risk assessment methodology were outlined in a letter from CH2M Hill submitted to DTSC June 29, 2007. DTSC staff plan to provide written comments to CH2M Hill's June letter within the next several weeks.
