

# Public Notice

The mission of DTSC is to protect California's people and environment from harmful effects of toxic substances through the restoration of contaminated resources, enforcement, regulation and pollution prevention.

## Announcing a 45-Day Public Comment Period on the Post Closure Permit Renewal for the USS POSCO Site

### Pittsburg, California

The California Department of Toxic Substances Control invites your comments on the Post Closure Permit Renewal for the USS POSCO Hazardous Waste Post Closure Landfill located at 900 Loveridge Road in Pittsburg, California. The public comment period begins on December 11, 2013 and ends on January 27, 2014. If approved, the Permit will allow USS POSCO (UPI) to continue to operate a hazardous waste post closure landfill.

#### Background:

Steel manufacturing and finishing have been conducted at the plant since 1909. Currently the facility processes semi-finished metal coils obtained from off-site steel producers. UPI converts these coils into finished steel products through methods known as cold reduction, annealing, and finishing. These methods employ techniques such as electrolytic tinning and chroming, pickling with hydrochloric and sulfuric acids, hot-dip galvanizing, cold rolling, alkaline cleaning, and annealing. Finished steel products include cold-rolled steel, galvanized steel, and tin and chrome-plated steel strip
