

Perchlorate BMPs

BMP Options for Tiered Applicability

This chart will be used as a reference during today's discussions. Its purpose is to group perchlorate-containing products and materials into categories expressing similar risk and control variables. Thereby, allowing BMPs to be applied in a tiered approach: matching BMP requirements to the environmental risk of the product/material and the availability of administrative and engineering control measures. The table of BMP options listed under each category identifies the scope of all available options for discussion purposes and does not represent a proposal. BMP options will be discussed during the afternoon sessions. Workshop comments will be used to develop the best management practices for each product/material category.

Industry/Manufacturing	Consumer Commodities		
	Intentionally Added		Unintentionally Added
	Wholesale Quantity	Consumer Quantity	
Labeling Options	Labeling Options	Labeling Options	Labeling Options
