### What is the Department of Toxic Substances Control (DTSC) and what do we do?

DTSC is part of the California Environmental Protection Agency. We regulate the storage and handling of hazardous materials. DTSC will ensure that the environmental investigations and clean up at the Ladera Linda Site will be done according to the standards of the State of California.

### Ladera Linda Site History:

The Site consists of property, owned by Palos Verdes Peninsula Unified School District, located adjacent to and north of Upper Ladera Field, at 32201 Forrestal Drive, Rancho Palos Verdes, California. It is an area approximately 400 feet by 60 feet - located north of the Upper Ladera improved soccer field. It has been reported that approximately 1,020 cubic yards of soil (85 truckloads) from a residential project in Torrance, California, were imported to the Site in April 2015. Imported soil was placed on top of, and then spread over, an existing stockpile created years ago when the improved soccer field, known as Ocean Field, was first constructed. The Site also includes any areas on which stockpiled soil and any other material contained within the stockpiled soil may have been deposited and any other material contained within the stockpiled soil that may have migrated, spread, or been moved.

### What Is Going On?

DTSC instructed the Palos Verdes Public Unified School District (PVUSD) and Palos Verdes American Youth Soccer Organization (PV AYSO) to submit a Preliminary Endangerment Assessment (PEA) to our agency. The Preliminary Endangerment Assessment (PEA) provides basic information for determining if there has been a release of a hazardous substance that presents a risk to human health or the environment. The PEA is a formal step in the Department of Toxic Substances Control's cleanup program. The PEA is intended to be the initial investigation of this site and is the first step in identifying whether a release or threatened release of a hazardous waste, substance, or material has occurred. The PEA will also estimate the potential risk to public health and the environment, evaluate, and provide an appropriate response based on risk, and determine if further action or investigation is needed.
