

SSFL Weekly Activity Report Week of July 29 – August 4, 2007

Community Meeting – August 1, 2007

On August 1, DTSC staff met with community representatives to hear a presentation on faults and drainage at the Santa Susana Field Laboratory. The agenda featured items of interest to community members representing neighborhoods surrounding the facility. DTSC provided an update to community representatives present on current investigations and the status of the Enforcement Order for Corrective Action to be issued to Boeing, NASA and The U.S. Department of Energy.

Radiological Risk Assessment Report - Centex Homes - August 3, 2007

On August 3, 2007, the Cleanup Operations - Southern California Branch/Glendale received the Radiological Risk Assessment Document for the radiological investigation of the Centex Homes -Sterling Homes Development property in West Hills.

Phase 2 and 3 Site Conceptual Model Work Plan Review

DTSC staff continued review of the Phase 2 Site Conceptual Work Plan received June 6, 2007, and the Phase 3 Site Conceptual Model Work Plan received July 18, 2007. The primary work proposed under Phase 2 work plan is the installation of a transect of coreholes and wells across the plume in the northeast area of SSFL. The Phase 3 work plan proposes to conduct additional drilling and rock coring, borehole geophysical logging, fluid temperature logging, packer testing to test fractures, hydraulic conductivity testing, and further sampling of seeps and springs surrounding SSFL.
