SITE INVESTIGATION/CLEANUP DOCUMENTS

- DTSC is reviewing the Revised Draft Remedial Investigation (RI) Work plan dated November 24, 2004. The Revised Draft RI Work plan provides a detailed plan for the further assessment and characterization of chemicals in soil gas, soil, surface water, and ground water at the Wyle Labs site. Evaluation of bedrock fractures and offsite investigation near northwestern boundary is included in the Work plan. The purpose of the RI is to define the nature, lateral and vertical extent of Wyle-related contamination.
- DTSC has received responses to the groundwater well survey. The purpose of the survey is to identify residents within half a mile from Wyle with private groundwater wells whether in use or not. Several residents indicated presence of a private well on their property. Wyle's contractor Environ will be contacting well owners within the next two weeks to schedule dates for inspection of the wells.
- DTSC is reviewing the Revised Report of Additional Investigation Along Site Boundary dated December 22, 2004. The report presents the Boundary Assessment results of the field investigations conducted along property boundaries in the areas northwest, west, and southwest of the former Wyle Laboratories facility. The purpose of the Boundary Assessment was to evaluate the potential for off-site migration of contaminants through surface runoff, soil gas, or subsurface drainage along the boundaries of the Site.

INVESTIGATION/CLEANUP FIELD WORK

- No change from last week's update

PUBLIC PARTICIPATION:

- DTSC responded to several inquiries from residents near Wyle regarding project status and potential impact to the surrounding community.
