for
Wyle Laboratories Norco Facility Site
April 28, 2006**

SITE INVESTIGATION/CLEANUP

- Continued operation and maintenance (O&M) activities for compound two, three, and four groundwater treatment systems for Areas F and H. The systems treat groundwater in these source areas and are designed to control the migration of plume.

Ongoing Remedial Investigation activities:

Last week

Onsite:

- Initiated Second Quarter 2006 groundwater sampling event.
- Developed newly installed wells MW-32, MW-35, and MW36.

Offsite:

- Collected vacuum measurements in observation and extraction wells associated with soil vapor extraction system at residences on Goldenwest Lane.
- Continued O & M activities for compound five, vapor extraction treatment system. The vapor extraction system pulls chemical vapors from the soil through a series of underground pipes and passes them through a carbon filter to remove the contaminants. The system will help prevent chemical vapors from seeping into the homes at the southern end of Golden West Lane.
- Initiated Second Quarter 2006 groundwater sampling event.

Sampling planned for this week

Onsite:

- The workers are planning to install MW-38, MW-39, and MW-40. Also, based on the progress of drilling activities, workers may install MW-34, MW-38B, MW-39B, and/or MW-40B.
- Continue second quarter groundwater sampling event.
- The workers are planning to survey newly installed on-site wells.
- The workers will continue conducting O&M activities associated with compounds two, three, and four.
- Continue O&M activities for compound five, vapor extraction treatment system.

Offsite:

- Continue second quarter groundwater sampling event.

- Continue collecting vacuum measurements in monitoring and extraction wells associated with the extraction system, located on the Wyle property near Golden West Lane. These measurements are taken to determine how much air vapor the vacuum unit is pulling back onto the site, and will help us determine how well the system is working.
- Perform additional indoor air sampling in Buildings B and D of Norco High School. Two rounds of sampling have been conducted in these Buildings and no contamination was found. Since these Buildings overlie the shallow groundwater plume, DTSC required additional precautionary sampling.

Public participation

- None to report.
