Wyle Laboratories Norco Facility Site
September 13, 2004

SITE INVESTIGATION/CLEANUP DOCUMENTS

- DTSC received access agreements from Wyle for distribution to residents where sampling will be conducted. DTSC requested Wyle to conduct sampling on residential properties near northwestern and western boundary to assess offsite impact from Wyle-related contaminants. Access agreements signed by residents are needed to authorize Wyle's Contractors to collect samples on private properties.
- DTSC finalized an access agreement to sample a private groundwater well near Wyle (southwestern corner of Hillside Avenue and Third Street). DTSC staff will collect a groundwater sample from the well.

INVESTIGATION/CLEANUP FIELD WORK

- DTSC project team continued its inspection of site areas to evaluate sampling locations proposed in the draft remedial investigation workplan. DTSC staff requested modification of the sampling locations and/or request additional location/analysis as necessary. DTSC staff inspected Area J, Area K and Quarry Area.

PUBLIC PARTICIPATION:

- DTSC staff met with residents on Golden West Lane and Hillside Avenue to discuss indoor air and soil gas sampling on their properties, and to distribute access agreements for signature.
- DTSC placed the approved Technical Memorandum, DTSC conditional approval letter of the Technical Memorandum, and ENVIRON's monthly update report entitled "Wyle Update #9 - August 15 2004" in the information repositories.
- DTSC updated Jeanne Guertin, CAG chair, on the latest developments of the Wyle investigation and cleanup.
