

# WORK NOTICE

**John Swett High School  
Proposed Expansion Project  
1098 Pomona Street  
Crockett, California**

## Soil Cleanup Planned - Starting March 1, 2012

The Department of Toxic Substances Control (DTSC) will oversee the removal of approximately 150 cubic yards of volatile organic compounds (VOC) impacted soil from this property. This will be followed by the installation and then sampling of vapor monitoring wells and groundwater monitoring wells.

The following actions will be implemented during this process to ensure public safety and minimize dust:

- Barricades or fencing will be installed to minimize access.
- All vehicles will maintain slow speeds while on the property.
- The VOC impacted soil stockpiles, if any, will be constructed on an impermeable base (e.g., concrete/asphalt pavement, plastic sheeting) and covered with plastic sheeting to prevent run on/runoff and fugitive dust emissions.
- Water spray and other forms of dust control will be used to control dust.
- VOC emissions from VOC impacted areas will be controlled by treating with water spray, a vapor suppressant, or covering the area.
- Monitor the dust generated and VOC emissions from VOC impacted areas during the soil remediation and handling activities to ensure that levels remain below concerns to human health and the environment.
- Use tarps or other suitable enclosures on haul trucks and, if needed, cleaning soil off truck tires prior to exiting the site.

Work will be conducted Monday through Saturday from 7 a.m. to 7 p.m. and is expected to take about 3 months to complete.

Additional information is available through DTSC's EnviroStor database system at <http://www.envirostor.dtsc.ca.gov/public/>. Type "Crockett" as the City, then click on the "Get Report" button at the bottom of the page. To select John Swett High School, click on the link "[Report]" to see information and documents.
